ABOUT US

We have created a range of beautiful designs and style that can create a new decor for your home. We have re-imagined the concept of home decor with our talented team and products. You can recreate your home decor with our creativity. Choose PEBBLE to bring home a fresh breath of air to your home.

We can add a new vibe to your home decor.

ULTRA TREND

1.3mm ACRYLIC

Pebble Glisto 1.3mm is an ideal solution as a surface material for furniture where durability, versatility and long-lasting beauty are a must.

1.3mm Decorative sheet for furniture

ULTRA TREND

Pebble 1.3mm Scratch resistant is a uniquely engineered product that incorporates the benefit of a thinner competitively priced product with a more durable impact resistant material. Our 1.3mm superior scratch and impact resistant acrylic allows for one product to take the place of two by allowing the designer to use 1.3mm acrylic in kitchens and bedrooms even in the most abusive and high impact areas. Pebble's 1.3mm scratch resistant acrylic is answer for all your design and application requirements.

Scratch Resistance
Superior resistance to scratch, 6H, abrasion and impact

Stain Resistance
Easy to clean with soap & water
Strong resistance to chemical

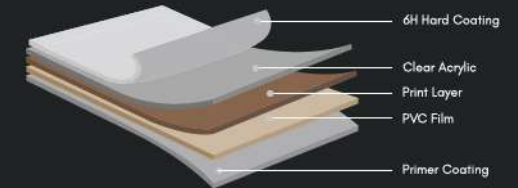

Superior Gloss
Maximum gloss level than any other surface decor

Ideal for Vertical Applications
This decor is suggested for vertical applications

GLORIOUS STYLE

Elements to dress up your decor with style and artistic designs

ENVIRONMENTAL STATEMENT

Pebble is a co extruded, high gloss, rigid thermoplastic polymer sheet consisting of a thick water clear layer which is permanently fused to high solids color layer.

Pebble is PMMA (polymethyl methacrylate) polymer which is completely inert and does not release any emissions to the environment. Pebble Acrylic is ultra hygienic and does not promote bacterial growth or transmission.

The unique properties of Pebble acrylic make it ideally suited to new or refurbishment for interior vertical surfaces around the home, office or commercial environments. Acrylic can be applied with a minimum of preparation over previously finished walls, reducing demolition waste and energy consumption.

Pebble Acrylic consists of Carbon, Hydrogen and Oxygen and is recyclable either by mechanical, chemical or thermal means. Pebble can be ground and pelletized for reuse in sheet extrusion or injection molding. If correctly incinerated Pebble produces only water and carbon dioxide. Pebble can also be chemically reduced to its original monomer for use in other acrylic based products. Pebble's unique color layer is achieved without the use of secondary processes or VOC's. The color and clear layers will not separate under any conditions and are not affected by moisture in any way. Pebble Acrylic cannot rot and is not susceptible to termite attack.

Pebble is half the weight of an equivalent glass panel and therefore uses less energy during transportation and installation.

Pebble will only consume around 10% of the original energy consumption during recycling. In contrast to glass which consumes more than 60% of its original energy consumption during recycling.

Pebble is wholly manufactured under the Environmental Management System which has been independently accredited to ISO14001. The acrylic manufacturing process does not release any harmful emissions to air, land or water.

Additionally, the Pebble manufacturing plant uses a compact footprint and is fully self contained.

Antibacterial
99%

PEBBLE ADVANTAGE

REFLECTIONS

TRUE GLOSS ACRYLIC LAMINATES

SAVINGS

Time and Cost : Pebble Acrylic saves time and money, because you do not need to lay individual tiles or use any grouting – and time is money on any project. Pebble Acrylic is light weight, easy to handle and can be cut, drilled and shaped on site unlike other materials such as glass panels.

Freight and Packing : Costs are reduced because of acrylic's low weight, allowing for more shipping and transport options. Less energy is used for cartage, plus it's easier to handle and move around with less change as breakage.

Maintenance: Being completely inert with an impervious surface, bacteria and mold do not permeate the sheet. Surface contamination is simple wiped off with mild soap and water – delivering a significant saving in labour and chemicals use over the life of the installation.

CLEANING AND REFINISHING

Pebble Acrylic is easy to clean using mild soap, warm water and a soft microfibre cloth or chamois. Strong chemicals are not required. Waterproof, impervious ultra-hygienic surface.

Minor scratching and scuffing can be easily removed by hand with selected liquid polices and a micro fibre cloth.

INSTALLATION

The installation of these sheets can be pasted with acrylic compactable adhesives on a calibrated clean and dust free dry surface. Use of laminate bonding tapes also can be used for difficult areas.

PERFORMANCE

Pebble Acrylic is a proven performer because it has a single infused acrylic core into one layer. This means:

- The colour is not a thin, inconsistent or patchy layer of paint.
- The colour layer is fused to the clear acrylic and will not separate easily.
- Unlike glass and other painted acrylic sheet products, minor scratches to the colour layer will not show through.
- Minor scratching and scuffing can be easily removed by hand with selected liquid polices and a micro fibre cloth.

ENVIRONMENT

Pebble Acrylic is designed to have a minimal impact to the environment and is wholly manufactured under the Environment Management System(EMS), which has been independently accredited to ISO14001. The manufacturing process does not release any harmful emissions to the air, land or water. Pebble's Acrylic is Hygienic and does not promote bacteria growth or transmission making it ideal for food outlets, high traffic area and public spaces.

WARNING

- Pebble Acrylic is designed for interior, vertical use only.
- Pebble Acrylic will expand and contract with different temperatures levels and will perform best in temperature controlled environments with trim recommended expansion gaps.
- Avoid use in areas exposed to intense direct sunlight such as adjacent to skylights or large unshaded window.
- Acrylic is translucent in nature and should be used on plain side of calibrated surface with suitable adhesives.
- Hot Machine Press is not recommended for this product if processed in factories.

APPLICATION

Pebble Acrylic sheets can be laminated to a variety of substrates. Best results will be achieved using suitable adhesive or any other equivalent adhesive applied through automated lamination machine or a well controlled manual fashion.

The combination of a very rigid substrate, such as High Density Fiber Board (HDF) or calibrated hardwood plywood with an adequate backing material is essential to achieve a stable panel.

Not all colours are available in all regions.
